A Case Study in Ethics

October 2026

ABSTRACT

As digital platforms become integral to youth social life, standard "notice-and-consent" age-gating mechanisms create a fundamental ethical conflict. This case study examines the degree to which social media platforms should be held responsible for safeguarding minors' privacy, safety, and digital footprints. Primary empirical data gathered from young Filipino internet users ($N = 30$) reveals a stark behavioral paradox: while 86.7% of respondents consider age falsification morally wrong, 83.3% admit to faking their age to bypass platform restrictions. Furthermore, ***66.7%*** *reported forming online connections with strangers featuring large age gaps, and 56.7% specifically falsified their age on unmoderated platforms such as Twitter/X and Reddit. Evaluating these empirical insights alongside global frameworks (UN General Comment No. 25) and Philippine legislative initiatives (House Bills 9965, 9461, and Senate Bill 1819), this study demonstrates that superficial age gates shift legal and moral burdens onto children while socializing them into forfeiting basic privacy rights. We argue that platform operators must move away from ineffective blanket bans and reactive measures, adopting instead structural "Privacy and Safety by Design," device-level age signaling through zero-knowledge proofs, and mandatory local jurisdictional representation.*

CHAPTER I

INTRODUCTION

"When your morality only exists when it costs you nothing, then how much is your morality really worth?"

When children are forced to deceive digital systems just to access online spaces, where does the ethical burden truly rest—on the minor who falsifies their age, or on platform architects who profit from passive compliance while conditioning youth to trade away their privacy? Primary survey data gathered from young Filipino internet users reveals a stark behavioral paradox: while **86.7% (**$26/30$**)** of respondents explicitly state that lying about one's age online is morally wrong, an overwhelming **83.3% (**$25/30$**)** admit to having faked their age to bypass platform barriers. Furthermore, **56.7% (**$17/30$**)** report falsifying their age specifically on unmoderated networks like Twitter/X or Reddit. This profound divergence between moral belief and digital behavior illustrates that age barriers without robust structural verification do not deter minors; instead, they socialize children into forfeiting basic privacy standards at the entry point of the digital world.

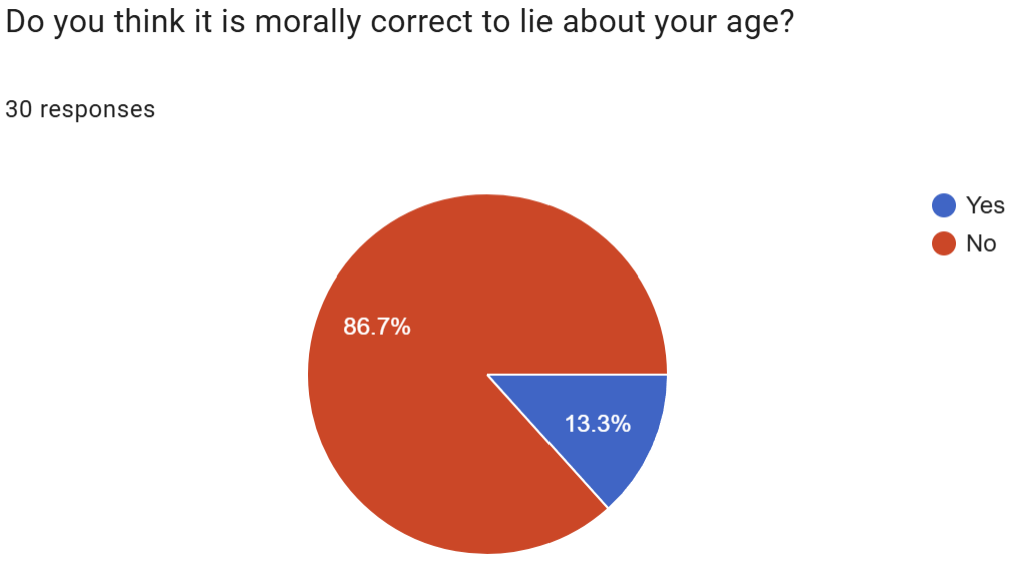

Figure 1. Bar chart comparing the 86.7% who believe lying about age is morally wrong vs. the 83.3% who admit to lying online

Background of the Study

The Philippines represents a critical focal point for child online safety. National digital tracking reports consistently place the country among the highest globally in screen engagement. Data from the Philippine Statistics Authority (PSA) shows that digital account ownership begins remarkably early: **87.64% of 12-year-olds**, **80.76% of 11-year-olds**, and **72.86% of 10-year-olds** hold active social media profiles.

Surveyed respondents reported accessing social media for the first time at an average age of **8.38 years old**, with entry ages as young as 3 to 4 years old. Filipino minors record an average daily screen time of **3 hours and 34 minutes**—ranking **6th globally** and substantially surpassing the recommended maximum of 2 hours for children under 13.

This heavy digital immersion exposes minors to long-term digital footprint vulnerabilities. Local research by De La Salle University's Social Development and Research Center (DLSU-SDRC) examined 1,873 profile accounts of Filipino minors, finding that:

- **60.3%** displayed a clear face photo
- **59.6%** published their full last name
- **40.3%** disclosed their home address
- **43.6%** named their school
- **23.9%** listed their private phone number

Combined with unmonitored communication habits, these persistent data trails create severe exposure to online grooming, data profiling, targeted advertisement, and cyber threats.

	COUNTRY	SOCIAL MEDIA USERS 2025 ↓	% OF POPULATION 2025 2025
	China	1.3B	90.3%
	India	500M	34.1%
	United States	254M	73%
	Indonesia	180M	62.9%
	Brazil	150M	70.4%
	Russia	106M	73.7%
	Mexico	99M	74.9%
	Japan	99M	80.5%
	Philippines	95.8M	81.9%
	Pakistan	79.9M	31.2%
	Vietnam	79M	77.6%
	Mayotte	78.9M	23.2%
	Germany	64.7M	77.1%

Figure 2. Social Media User by Country [taken from the World Population Review]

As illustrated in global demographic metrics from the World Population Review (Figure 2), the Philippines ranks 9th worldwide in total volume of social media consumers, with **95.8 million active user identities**. However, when evaluating market adoption relative to national scale, the country records one of the highest digital saturation rates globally, with **81.9% of its total population** actively engaged on social platforms—substantially outperforming larger nations in population coverage, including the United States (73%), Brazil (70.4%), Indonesia (62.9%), and India (34.1%). This pervasive social media adoption highlights a highly connected domestic landscape where digital engagement is deeply woven into daily social life, creating an environment where minors encounter early, high-frequency exposure to digital networks and online data vulnerabilities.

Hypothesis/es of the Study

- H_1: Superficial "notice-and-consent" age checkboxes create a systematic moral hazard that incentivizes minors to falsify their age, thereby transferring privacy liability from platform architects onto child users.
- H_2: Symbolic, heavy-handed regulatory actions (such as brief blanket platform bans) do not reduce exposure to online hazards and are perceived by youth as ineffective interventions compared to structural, platform-level safety assurances.

Theoretical Framework

This case study is grounded in two primary frameworks:

1. **Value-Sensitive Design (VSD) & Privacy by Design (PbD):** Proposes that ethical values—specifically privacy, identity protection, and child safety—must be proactively integrated into the core architecture of software systems rather than added retroactively via policy disclaimers or self-reporting check-boxes.
2. **Deontological Ethics vs. Utilitarian Utility:** Examines the tension between a child's deontological moral awareness (recognizing that lying is inherently wrong) and their utilitarian outcome-seeking behavior (falsifying birthdates to prevent social exclusion and access digital culture).

Conceptual Framework

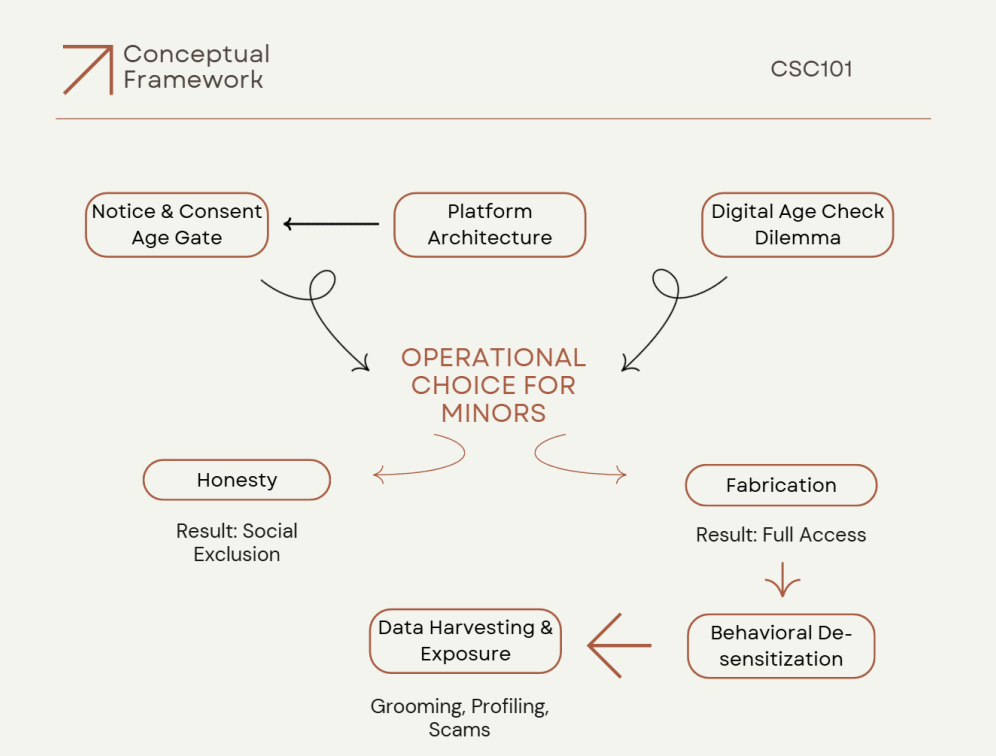

Figure 3. Conceptual Framework of Minor's choices on Social Media [Made via Canva]

Significance of the Study

This research provides empirical grounding on youth perspectives regarding age gating, digital privacy, and governance in the Philippines. It serves as an evaluative

resource for software developers, AI practitioners, platform architects, and legislative policymakers aiming to craft child-centric online safety standards.

Scope & Delimitations of the Study

- **Context & Target Audience:** The study focuses on young Filipino internet users' behaviors, perceptions of privacy, experience with age gates, and evaluations of platform governance.
- **Time Delimitation:** Primary data collection was restricted to a strict **24-hour window** to capture rapid primary empirical insights for an informal ethics case study.
- **Sampling Delimitation:** The research utilized convenience sampling limited to known peer networks and contacts of the researchers.
- **Ethical & Consent Delimitation:** To satisfy academic ethical standards for an informal study without requiring signed parental waiver forms, participation was limited strictly to individuals known to the research team. Participant identities were safeguarded through anonymous data gathering: respondents were not asked for their names, but Google Form settings mandated a valid email login restricted to **one response per user** to verify sample integrity while protecting privacy.

Definition of Terms

- **Age-Assurance / Age-Gating:** Technological measures used to estimate, verify, or restrict access based on a user's age.
- **Digital Footprint:** The traceable trail of personal data created through internet usage, including photos, location tags, and school affiliations.
- **Notice-and-Consent:** A regulatory paradigm where users accept terms of service or confirm age eligibility via simple prompt boxes or checkboxes.
- **Zero-Knowledge Proof (ZKP):** A cryptographic method enabling one party to prove to another that a statement is true (e.g., "I am over 13") without revealing any underlying personal data (e.g., exact date of birth or full identity).

CHAPTER II

REVIEW OF RELATED LITERATURE

International Frameworks and Platform Responsibilities

At the international level, child rights in the digital ecosystem are defined by the United Nations Committee on the Rights of the Child through General Comment No. 25 (2021). The framework establishes that children maintain an inherent right to privacy that governments and commercial entities must protect. Ayalew et al. (2024) explain that internet intermediaries hold direct human rights obligations to avoid intrusive data practices, such as behavioral profiling, automated data tracking, and aggressive targeted advertising aimed at minors.

Concurrently, global evidence highlights the mental health and safety risks of unregulated social media access. The U.S. Surgeon General's advisory (2023) highlighted that up to **95%** of adolescents aged 13–17 utilize social media, with one-third reporting near-constant use. The advisory noted that adolescents spending over 3 hours daily on social media face double the risk of experiencing depression and anxiety symptoms, concluding that tech platforms have failed to prove their services are sufficiently safe for youth. Furthermore, global privacy audits demonstrate widespread systemic failures: an Australian Information Commissioner (OAIC, 2026) sweep of 876 child-oriented apps and websites found that **71%** lacked child-specific protective controls, **72%** relied on age checks that were easily bypassed, and **46%** demanded location data.

Philippine Policy Landscape and Legislative Measures

In response to rising online risks, Philippine lawmakers and regulatory bodies have initiated several legislative bills:

1. **House Bill No. 9965 (Children's Social Media Safety Act):** Introduced by Rep. Faustino "Bojie" Dy III and Majority Leader Ferdinand Alexander Marcos, HB 9965 establishes an age-based framework prohibiting children under 13 from creating

or maintaining social media accounts. For minors aged 13 to 17, account access requires verifiable parental consent. The bill mandates default high-privacy settings, restricts geolocation tracking, bans biometric data harvesting, and holds platforms liable through temporary suspensions or operational prohibitions for repeat offenses.

2. **House Bill No. 9461 (Child Online Safety and Protection Act of 2026):** Criminalizes online grooming, sexual extortion, luring, and AI-generated child exploitation, imposing prison sentences of 12 to 20 years.
3. **Senate Bill No. 1819 (SAGIP BATA Act):** Introduced by Sen. Risa Hontiveros to replace existing OSAEC laws (RA 11930), strengthening law enforcement capabilities against AI-enabled abuse, establishing age-assurance mandates, and requiring tech companies to maintain resident legal agents in the Philippines.

The necessity for local jurisdiction was underscored in early 2026 when the National Telecommunications Commission (NTC) temporarily blocked Discord following reports of Nihilistic Violent Extremist (NVE) content and minor grooming. The ban was lifted within 24 hours after platform executives agreed to assign local legal representation and implement age-assurance tools.

CHAPTER III

METHODOLOGY & RESULTS

Design of the Study

This study utilized a mixed quantitative and qualitative primary survey design to evaluate online usage patterns, age-falsification behaviors, exposure to risks, and attitudes toward digital platform governance.

Population & Sampling

- **Sample Size:** $N = 30$ primary respondents.
- **Sampling Technique:** Convenience sampling restricted to known peer groups across diverse educational institutions.
- **Demographics:** 73.3% of respondents were aged 18–19 years old, with the remaining respondents ranging from 11 to 20 years old. First social media access occurred at a mean age of **8.38 years old** (ranging from ages 3 to 16).

Research Instrument & Validation

A structured online questionnaire was built and administered via Google Forms. The instrument contained fixed categorical questions, rating scales, and open-ended thematic prompts. To ensure validity, the survey was reviewed by academic advisers and pre-tested for clarity prior to deployment.

Method & Data Collection

Data collection was executed over a **24-hour period**. To satisfy ethical standards for informal research without requiring written parental consent forms, outreach was kept to known contacts. Privacy was strictly maintained: no names were collected. To preserve

data integrity and prevent multiple submissions, the Google Form required sign-in and enforced a strict **one response per user** control.

Variable / Metric	Distribution / Value	Percentage / Summary
Total Sample Size (N)	30 Respondents	100.0%
Mean Age of First Social Media Access	8.38 years old (Range: 3–16)	N/A
Current Age Distribution	Age 18: 13 | Age 19: 9 | Age 16–17: | Other: :	73.3% aged 18–19
Have Lied About Age Online	Yes: 25 | No: 5	**83.3% Yes**
Believes Age Lying is Morally Correct	No: 26 | Yes: 4	**86.7% No**
Faked Age on Twitter/X or Reddit	Yes: 17 | No: 13	**56.7% Yes**
Met Online Strangers with Large Age Gaps	Yes: 20 | Unsure: 4 | No: 6	**66.7% Yes**
Oldest Stranger Met Online	Range: 18 to 50+ years old (Mode: 25)	High exposure to adults

Variable / Metric	Distribution / Value	Percentage / Summary
Supports Age Restrictions on Apps	Yes: 27 | No: 3	**90.0% Support**
Opposes Uncontextual Adult-Minor Chat	No (Oppose): 20 | Yes (Allow): 10	**66.7% Oppose**
Discord Usage Rate	Active: 16 | Sometimes: 8 | No: 6	80.0% of use********** base

Table 1. Results gathered from students' personal Survey lasting 24 hours [Made via Google forms]

Qualitative Findings & Thematic Analysis

1. **Reasons for Falsifying Age:** Respondents cited bypass mechanisms to create accounts ("*to access the application*", "*qualified age is 18 & above*"), desire for peer status ("*fit in*", "*thought it would be cooler to be close to older people*"), and privacy protection against platforms ("*thought my birthday was private information*").
2. **Evaluation of the Discord Ban:** An overwhelming majority evaluated the 24-hour Discord block as an ineffective, "band-aid solution" caused by insufficient policy investigation. Respondents noted that heavy-handed app bans disrupt educational/work communities without addressing core issues.
3. **Worst Apps for Minors:** Twitter/X, Telegram, Discord, and Snapchat were repeatedly identified as the most dangerous platforms due to unmoderated content, ease of identity concealment, encryption, and abundance of adult users.
4. **Youth Perspectives on Governance:** Qualitative feedback emphasized that digital safety requires systemic reform and platform-level age assurance rather than punitive bans. As one 15-year-old respondent noted, reliance on simple age checkboxes forces children into deceptive habits, shifting systemic neglect onto the individual child.

The Cost-Free Morality Conflict

The core finding of this study centers on the quote:

"When your morality only exists when it costs you nothing, then how much is your morality really worth?"

For a minor navigating the internet, adherence to honesty carries an immediate operational cost: total exclusion from social connectivity, educational groups, and digital culture. Because platforms utilize low-friction "notice-and-consent" check-boxes, minors rationalize age fabrication as a necessary utility. The survey demonstrates that while **86.7%** maintain an abstract moral standard that lying is wrong, **83.3%** routinely violate this standard because the platform design imposes no barrier other than minor honesty. Morality, when pitted against digital isolation, is routinely set aside.

Platform Architecture vs. Individual Accountability

The survey data confirms that **66.7%** of young users have formed online relationships with strangers featuring large age gaps, with strangers ranging up to **50+ years old**. Despite this exposure, existing platform architectures place the primary burden of protection on parental supervision or child self-regulation.

However, empirical evidence indicates that relying on notice-and-consent or self-reporting fails to prevent harm. Tech platforms profit from user acquisition, engagement metrics, and data harvesting. By delegating age verification to simple prompt boxes, platforms shift legal and moral accountability onto children while gathering their personal profiles, facial photos, and location data.

CHAPTER IV

DISCUSSION

"When your morality only exists when it costs you nothing, then how much is your morality really worth?"

For a minor navigating the internet, adherence to honesty carries an immediate operational cost: total exclusion from social connectivity, educational groups, and digital culture. Because platforms utilize low-friction "notice-and-consent" checkboxes, minors rationalize age fabrication as a necessary utility. The survey demonstrates that while 86.7% maintain an abstract moral standard that lying is wrong, 83.3% routinely violate this standard because the platform design imposes no barrier other than minor honesty. Morality, when pitted against digital isolation, is routinely set aside.

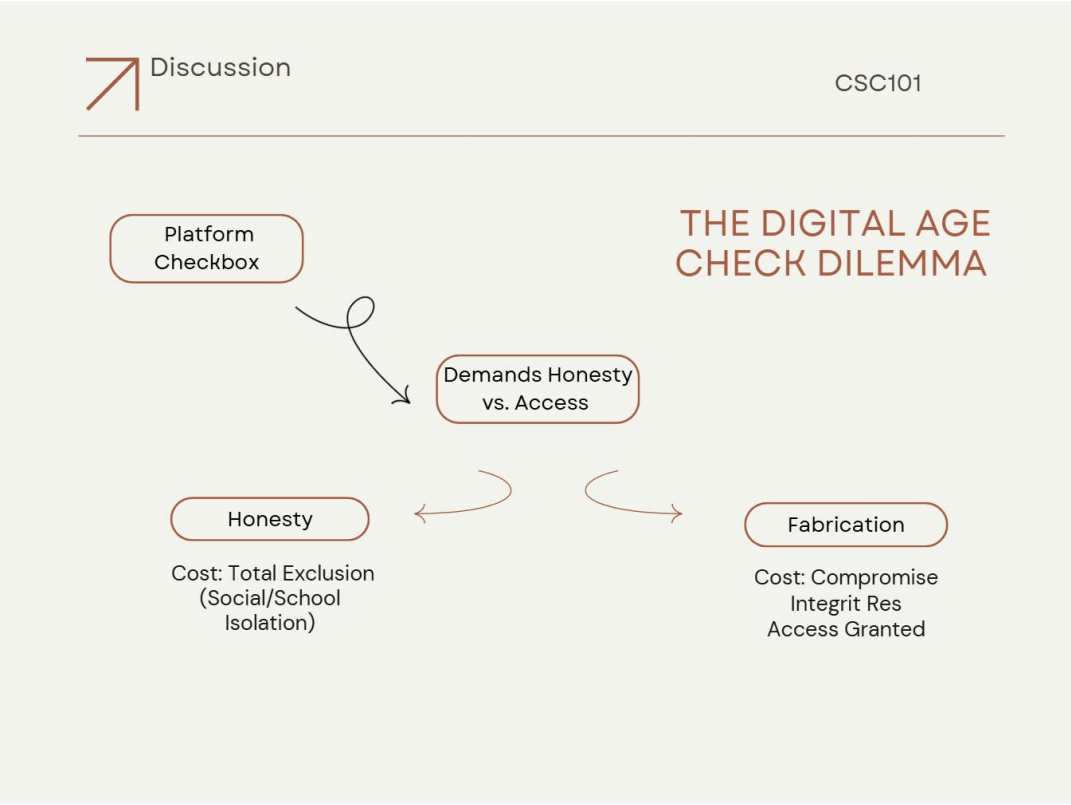

Figure 4. Discussion table [Made via Canva]

The survey data confirms that 66.7% of young users have formed online relationships with strangers featuring large age gaps, with strangers ranging up to 50+ years old. Despite this exposure, existing platform architectures place the primary burden of protection on parental supervision or child self-regulation.

However, empirical evidence indicates that relying on notice-and-consent or self-reporting fails to prevent harm. Tech platforms profit from user acquisition, engagement metrics, and data harvesting. By delegating age verification to simple prompt boxes, platforms shift legal and moral accountability onto children while gathering their personal profiles, facial photos, and location data.

Recommendations

To address these systemic vulnerabilities, a multi-tiered framework combining platform obligations, regulatory oversight, and digital literacy is required:

I. Platform Level: "Privacy and Safety by Design"

- Device/App-Store Age Signaling: Instead of individual apps asking for birthdates, age verification should occur at the OS or App Store level using privacy-preserving zero-knowledge proofs (e.g., age-signaling tokens). This removes the incentive for minors to lie on individual apps while preventing platforms from collecting sensitive identity documents.
- Strict Default Controls: Platforms must enforce maximum privacy settings by default for users under 18—disabling public geolocation, turning off adult direct messaging, and prohibiting targeted ad profiling.

II. Governmental Level: Regulatory Accountability

- Enactment of HB 9965, HB 9461, and SB 1819: Pass comprehensive legislation establishing clear legal standards for platform operation in the Philippines.
- Mandatory Local Representation: Require foreign technology entities to maintain resident agents within Philippine jurisdiction to enforce legal compliance, data requests, and rapid reporting of child exploitation.
- Avoid Symbolic Bans: Transition away from temporary network blocks (such as the 24-hour Discord ban) toward structured compliance audits, financial penalties, and enforcement of safety-by-design standards.

III. Social & Educational Level: Digital Literacy

- Early Digital Citizenship Curriculum: Introduce mandatory online safety, data privacy awareness, and digital citizenship modules in elementary education prior to the average age of initial exposure (8 years old).
- Empowered Community Reporting: Establish accessible, child-friendly reporting channels down to the local barangay level so minors can report online harassment or grooming without fear of parental punishment.

APPENDICES

Accomplished Survey

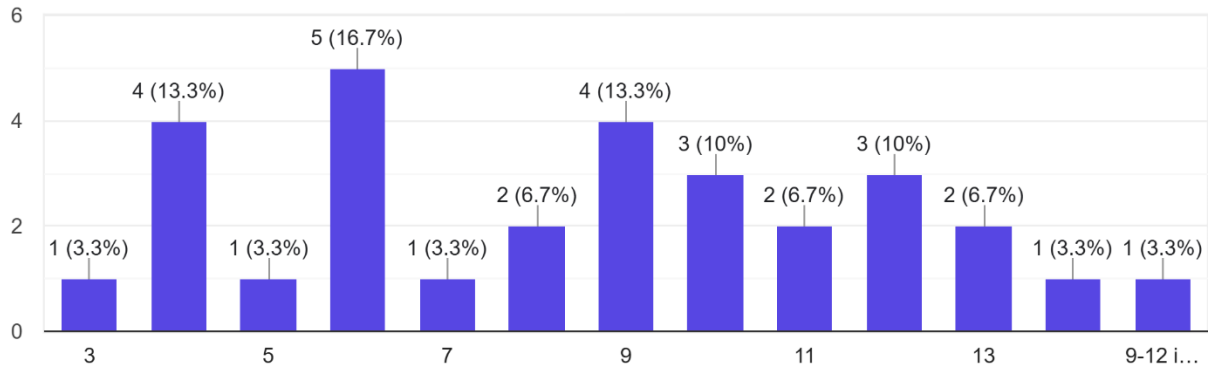

Do you consent to have your responses recorded under our study? (If no, your response will be deleted)

30 responses

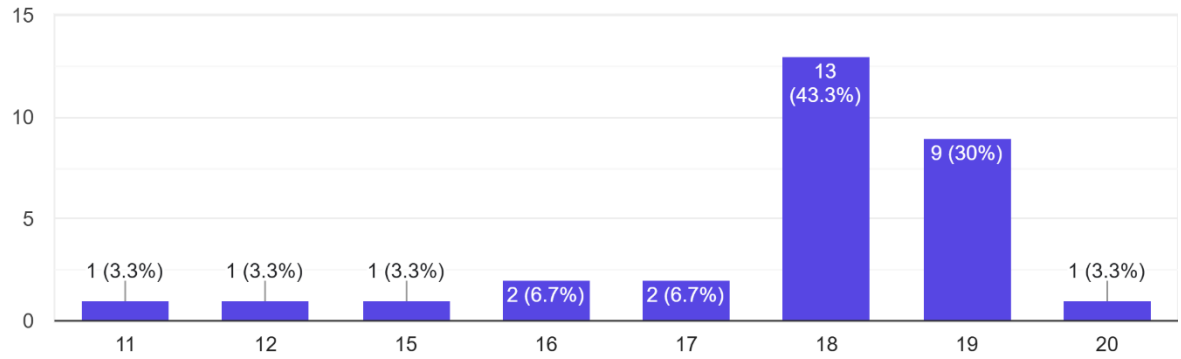

How old were you when you first went onto any Social Media Application? (Type in only the Numerical value (ex. 1, 2, 3,...)

30 responses

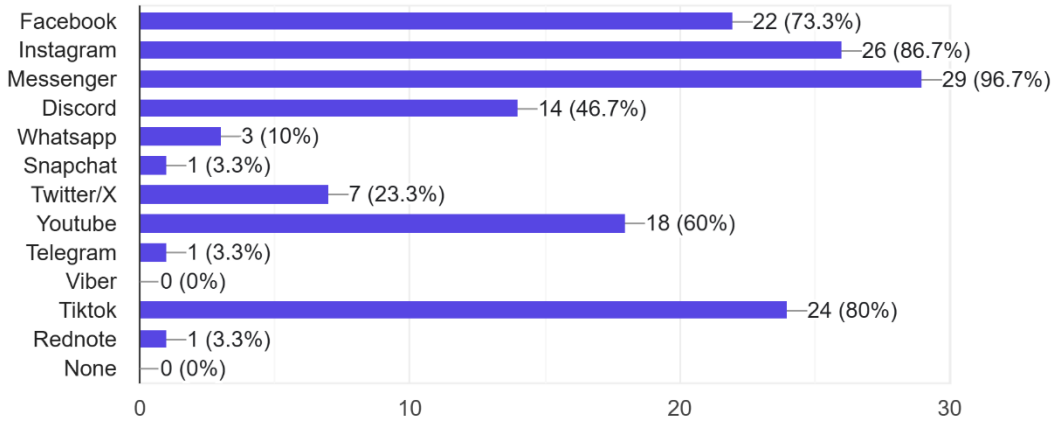

How old are you currently? (Also follow the same format as the former question)

30 responses

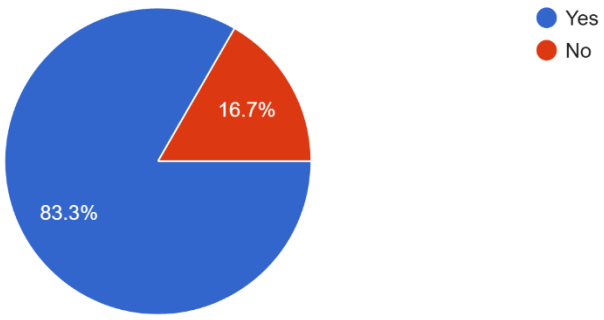

Check whichever of these Social Media Apps you used most frequently

30 responses

Have you ever lied about your age online?

30 responses

If yes, why? (Optional)

24 responses

N/A

It did not seem wise to display my actual age and I wanted to seem older than how I really was.

when I was 12 below I lied about my age to hide my identity as a child. but now I was 15 I don't do it anymore.

To play online games and games in genera (GTA and other gore/bloody games)

To avoid other people

Fit in

To mask actual age from social media networks.

I thought my birthday was very private information

To be able to create a valid account

If yes, why? (Optional)

24 responses

To be able to create a valid account

Cause I thought it would be cooler to be close to older people since they know alot-ish

To access the application

To protect my personal information.

For creating account purposes

i was too young?

To fit in with others

for voice chat in roblox 😵

Since I wanted to have social media accounts, I used my older brother's birth year. So I need to fake it

If yes, why? (Optional)

24 responses

To fit in with others

for voice chat in roblox 🥵

Since I wanted to have social media accounts, I used my older brother's birth year. So I need to fake it

To have a social media account. Since the qualified age to have a socmed acc is about 18 years old & above, I need to modify it to have one.

to appear older

to access the application

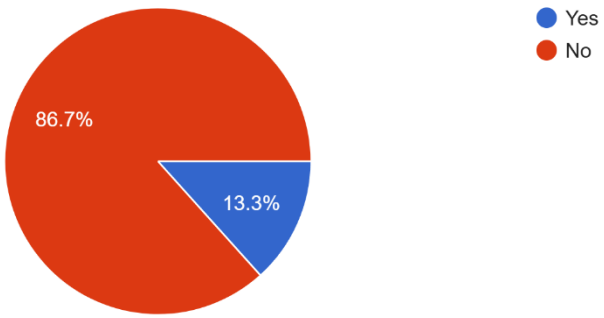

wanted to try new things

To seem older

To bypass age restrictions

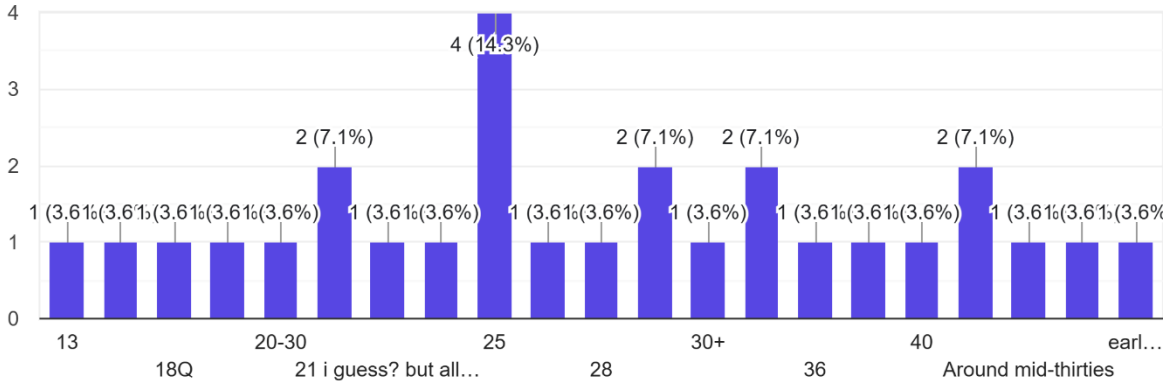

Do you think it is morally correct to lie about your age?

30 responses

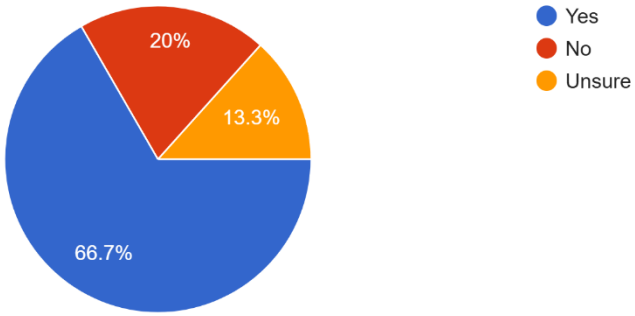

What is the oldest age of a stranger you met online?

28 responses

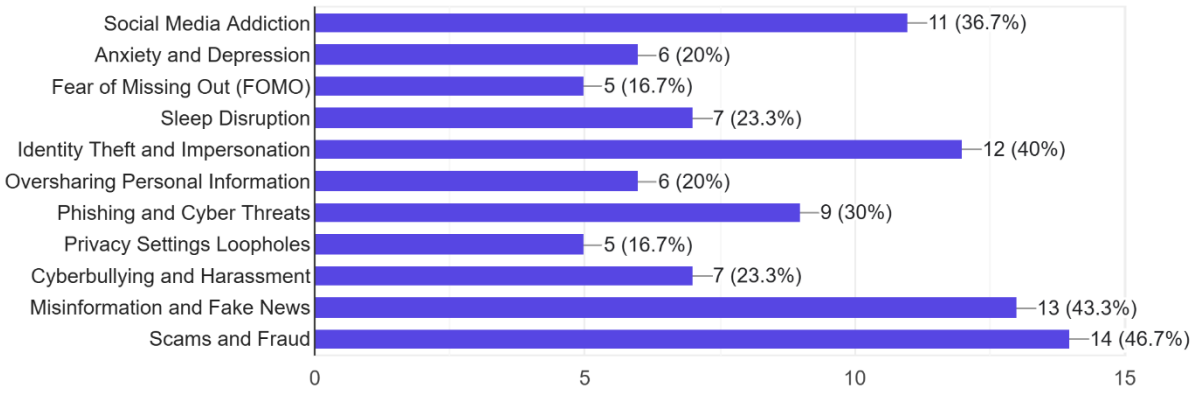

Have you ever met people online with large age gap friendships/relations compared to yours?

30 responses

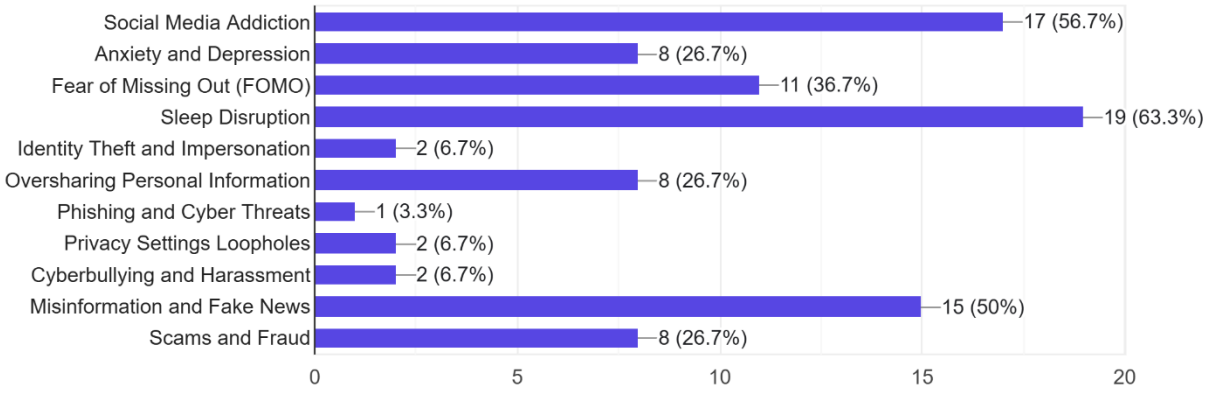

What is your top 3 concerns when going online?

30 responses

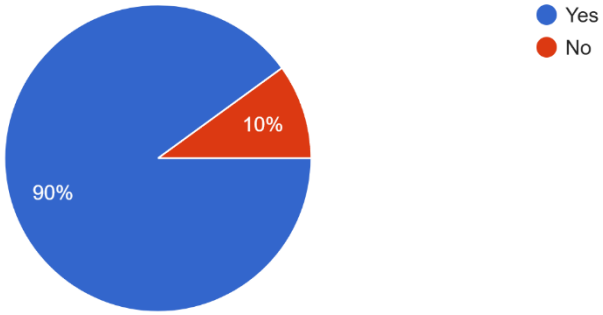

What issues have you experienced when online social wise?

30 responses

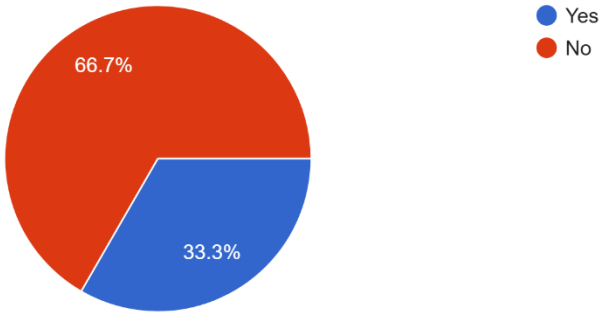

Do you think it is wise for there to be restrictions in regards to Minors/those underage in terms of communication apps?

30 responses

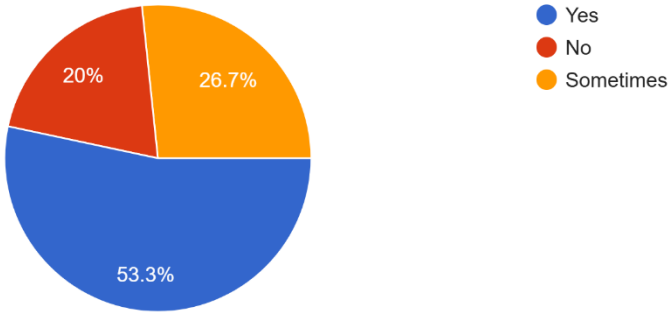

Do you think people who are legal should be conversing with minors with/without context on social media apps when aware of the minor's age?

30 responses

Do you use Discord?

30 responses

What do you think of the Discord ban that lasted one day?

30 responses

Not much, as I did not notice it not functioning.

It should not be band but instead reform the rules and policy of using it.

Frustrated

good for all minors

Honestly, there were several other things that they could've done instead of a ban. I think proper restrictions or age verifications should be enacted into the messaging platform instead. I also think they could've created a space to reduce the amplification of cyberbullying and limit adult to child contact OR USE MODERN MODELS like the Lantern model where a "groomer" can essentially be banned across different platforms once they're flagged as dangerous.

I Have no idea it was ban 💀 💀

I don't know, I don't use discord.

What do you think of the Discord ban that lasted one day?

30 responses

I think its kinda unnecessary cause its a useless

I think it was useless banning an app without ACTUAL proper investigation

Annoying

Dumb decision by the government.

Shows the incompetence of the department due to the lack of information they had on the uses before they banned the app

I live abroad, so I didn't really experience it but my country (PH) has a history of overlooking huge issues and settling for band-aid solutions.

Honestly, I knew it would come back in less than a day so I was neutral about it since I don't use dc for big/professional stuff. The only thing that got on my nerves was the reason for the ban. It was ridiculous.

Completely absurd

What do you think of the Discord ban that lasted one day?

30 responses

I didn't mind

Inconvenient and irrelevant.

I believe their intention was good but the execution of it was not bc banning an app does not eradicate all possible social media harm to the youth

i think the one-day disord ban was honestly unfair and unnecessary. it feels like an overreaction, especially if the situation could have been handled with a simple warning

Not that bad since I don't use discord much

upset..

A single-day ban was ineffective and caused unnecessary disruption for users who rely on the platform for school, work, or communication. It seemed more like a symbolic action rather than a well-planned solution to any underlying issue.

What do you think of the Discord ban that lasted one day?

30 responses

Not approved

I don't have anything to say about the banning of discord since I don't use that application.

It was unnecessary because they themselves use it. It is a mode of communication, and their lack of research about it makes us Filipinos look dumb.

Didn't really care much since I was still able to access it.

i don't really know much about it

very stupid, they banned it without doing proper research

top 2 retarded moments, second to only bbm being elected

I get why they banned it, especially for safety reasons, but I feel like banning the whole app was a bit much. They could've just focused on stricter moderation and the people actually causing problems.

Do you think the ban did anything to improve our country or the intentions of it?

30 responses

No

Absolutely not.

yeah

I think the people who approved the ban only had good intentions out of it. But the problem is it wasn't effective at all. It only created a sense of panic amongst students and businesses who use the platform. But I'm now informed that lawmakers are now trying to create a more safer and more digitally responsible generation, however, they're just not yet pointed at the right direction as of now.

There's a positive and negative side of it.

I don't know again. maybe yes and no? because someone I know uses discord to sell pets (roblox game) for money. but i also think it's understandable because there are children under 13 who use discord and lie about their age just so they can get into relationships. so, i'm not really sure if banning discord has actually helped improve our country.

Do you think the ban did anything to improve our country or the intentions of it?

30 responses

Nope its just dumb

No but the intentions were there (kinda)

No, people will still find loopholes to access Discord such as normal VPNs, dVPNs, proxies and etc.

No, in those >12 hours that it lasted, it could not have singlehandedly solved any minor or major issue relating to cybercrime.

Nope

Literally none, there are tons of things that they could've done instead of just banning apps like this.

No.

The intention yes or the initiation of change when it comes to our safety, yes. But the ban itself? No

i don't think it did much to improve the country. the intention may have been to enforce rules and

Do you think the ban did anything to improve our country or the intentions of it?

30 responses

i don't think it did much to improve the country. the intention may have been to enforce rules and discourage similar behavior, but a one-day ban seems too minor to create any real change

Yes

no, not at all

No, it did not improve anything because a brief 24-hour restriction fails to address real online safety concerns or platform governance. While the intentions may have been aimed at regulation or security, the execution was ineffective and served only as a minor inconvenience.

No, nothing improving our country for Bunning an app

I think it didn't improve much to improve the children safety because there's many big platforms that should be ban for minors, I don't use discord since I was a kid so it doesn't really matter to me.

No. It just made us look like fools to other countries, and became a hassle to the Filipino people who use it.

No, the ban was literally lifted after just 1 day.

i do rhink yes specially to minors

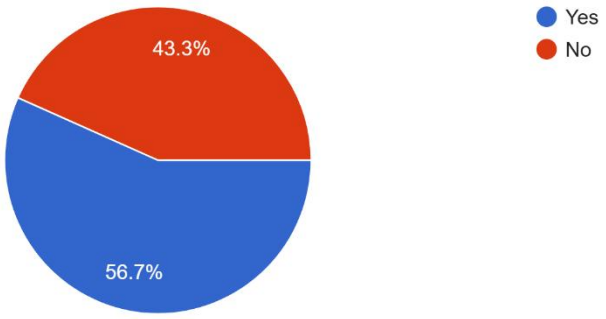

no

fuck nah

The one-day ban itself probably didn't do much. It was more of a way to push Discord to improve safety.

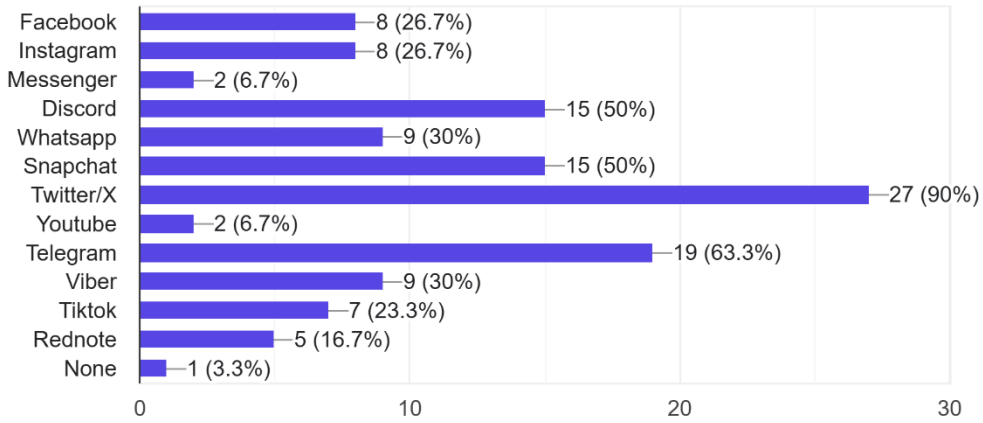

Have you ever gone on Twitter/X or Reddit and faked your age?

30 responses

Between all Social Media Applications which of these listed below would you consider the worst for Minors to join

30 responses

Why?

30 responses

These apps are often less restricted and have a reputation for undesirable occurrences.

Because these are the most common platforms where people post and share their insights.

Too many 18+ posts

because of minor

Because I've been to those three platforms (+ Threads) and they rarely ban or restrict posts with violence and sexual activity. I think for minors, they shouldn't be exposed to that type of media where they are desensitized to those kinds of actions.

For what I know specially snap chat people can randomly send inappropriate pics and kids mostly fake there age here.

no comment :p

Theres is a lot of weird people on those sitese and also alot of adult stuff aswell dont want to make them

Why?

Theres is a lot of weird people on those sitese and also alot of adult stuff aswell dont want to make them grow up too fast

Because adults mostly use those apps.

Too many weirdos

Full or porno (X) and racists (Instagram and TikTok) and toxic pinoys (Facebook)

There are many spaces that encourage bodily harm such as eating disorders and self harm. There is also little to none restriction on NSFW content (gore and pornography)

Some are worse than others, but what the apps I selected have in common is there is comparatively more freedom to criticize and be criticized. Additionally, there is more abundant access to harmful media, misinformation, and dangerous connections.

Weird and dangerous predators roam around social media. With how things are with AI and advance tech, and also the increase of under-aged users. It will be inevitable to avoid harmful interactions with these internet persistent weirdos

Why?

Of all the things I selected, nowadays there are so many inappropriate or out of context stuff in these specific social media platform.

There are many sexual content

These applications are mainly dominant towards legal age and above. More likely, it's adult rated.

It is composed of large different age groups and although it's good for its inclusivity to all, it also prompts a lot of possible harm and crime especially to the youth

i'd say twitter and discord are the worst for minors because predators can easily contact them through DMs, servers, and online communities (base on experience)

Bots on Snapchat that try to scam you, X because there are really sensitive opinions there along with some

Why?

30 responses

Bots on Snapchat that try to scam you, X because there are really sensitive opinions there along with some pornography, and Discord because of minors and adults being on there

I personally think that these apps I chose has a more weirder algorithm and sides of their platfrm, somewhat 🧐

Because these are not meant for them, as their rules are not strict enough when it comes to posting and sharing content.

Some of them has faking their age to get with minor

To protect them from severe mental health risks, addictive platform designs, and exposure to harmful online content

These apps have been used for malicious transactions, bypassing age requirements and other cyberaecurity protocols.

These apps are where most predators lurk.

Why?

These apps are where most predators lurk.

because its the main source of communication and they could have talk to some stranger and give personal informations that could be used to take advantage of them

have alot of innapropriate stuff

Selected platforms have a lot of activity that are not intended for the proper use of the social media platforms themselves

All-in-one platform and it's also very popular in the Philippines, so minors have more chances of being exposed to strangers, scams, inappropriate content, and privacy risks.

Optional: Anything else you might wish to say in regards to children safety on social media here in the Philippines

Whilst it is indeed most parent's jobs to circumnavigate the dangers of the internet and social media for their child, the ever-changing landscape makes even the most prepared family able to fall for harm.

Just have an age verification to some social media apps

The Philippines isn't readily equipped with the proper technology to protect children from OSAEC. I'm glad that the government is doing something about it knowing that it's very prominent now. But I believe that their actions should focus more on more proper monitoring, technology, and restrictions instead of creating a nationwide ban.

N/A

as a 15-year-old, i think children's safety on social media should be taken more seriously in the philippines. kids can easily encounter strangers, scams, cyberbullying, and inappropriate content online. i think instead of only banning platforms, we should also teach children how to protect themselves and use social media responsibly. parents, schools, and social media companies should work together to make the internet safer not for children but for everyone.

Give social media/a phone to them when they are a little older like ages 15+

Really needs better improvement and knowledge on the officials ends

I wish the government would stop acting like it's such a radical occurrence that our generation is so different from past generations. Our upbringing was founded upon years of production, and although we have certainly misused the results of that production, the responsibility that past generations have always had in keeping us safe and learning from the direction the world was going in the way of productivity hasn't gone away.

If restrictions get bypassed by minors, it is the negligence of the guardian/s to blame. It is important that we educate and warn minors about the dangers of the internet. Ignorance is a bliss, not until it becomes into a lethal weapon.

We need a better system aka better governance as well 👎🏻👎🏻👎🏻

Use social media very wisely and responsibly

Put restrictions towards minors and adults unless it's freelancing, but anything else, it should be strictly

Put restrictions towards minors and adults unless it's freelancing, but anything else, it should be strictly monitored.

i think child safety on social media should be taken more seriously in the Philippines. adults should guide kids, check their privacy settings, and teach them how to spot and report suspicious people online

Think before you do

pls don't blame it on games and social media bru

Parents need to watch their children

I hope all children would enjoy their life outside social media , and have a wider view of the world around them, instead of isolating themselves on a screen
